50th Annual Sale

SATURDAY MARCH 14 2026
DELTA SALES YARD **DELTA, COLORADO 1 PM**

Address

700 West 5th Street
Delta, Colorado 81416
970-874-4612

Directions

From Highway 6 & 50, turn West on 5th to sale barn

Suggested Lodging

Delta Comfort Inn - 970-874-1000
Days Inn - 970-874-9781
Both Motels are in Delta, CO

Food & Refreshments

Available at the sale

Insurance

Available sale day. WCAA suggests you insure your purchases.

Registration & Transfer of Papers

All bulls in this sale are registered with the American Angus Association. If you would like registration papers, please fill out the form at the office when paying for cattle.

Terms & Conditions

Cattle will sell under the Terms & Conditions as recommended by American Angus Association. All payments must be made to the Delta Sales Yard.

Announcements

Sale day announcements take precedence over printed material in this sale book or other print material associated with this sale.

Day Sheet

A supplemental sheet will be at the Registration/ Sign In table and will include current weights, scrotal measurements (taken within the past 30 days), EPD's & Pelvic measurements (if taken).

Free Delivery

Free delivery on all bulls within a 300 mile radius of Delta, Colorado (See map on following page). If conditions do not permit delivery to your ranch, delivery will be made to a central location in your area (sale barn). Please check with sale manager regarding questions on delivery.

Auctioneer: Roy Nelson

Sale Manager: Hugh Hardman 970-729-0968

Unable to attend bids

Contact the Auctioneer, Board Members, or Sale Manager - Hugh Hardman 970-729-0968 to place bids or for more information.

Online Bidding

Delta Sales Yard will be broadcasting the sale on-line. Buyers must pre-register 48 hours in advance to bid online. Scan the QR code on the following page to pre-register or go to the link below.

Dear Valued Buyer,

The Western Colorado Angus Association welcomes you to the 50th Annual Bull Sale, proudly marking our 50th year as an association. This year's offering is built for the realities of high-altitude production. The sale features a strong line-up of yearling and long yearling 18-month-old bulls, with breeder emphasis on calving ease, growth, and low PAP. These bulls are designed to go to work immediately and perform reliably at any elevation.

The sale will once again be held at the Delta Sales Yard, with online bidding and live video available through Delta Sales Yard- www.cattleusa.com. Bulls may be previewed prior to the sale on the WCAA website. The sale catalog and many videos can be seen on WCAA facebook page. At WCAA, we take pride in 50 years of quality cattle, customer service, and trusted genetics. Please contact any member with questions or to place an over-the-phone bid. Thank you for your continued support—we look forward to seeing you on March 14.

Sincerely,

WCAA Sale Committee

MAP SHOWS FREE DELIVERY RADIUS. NOTICE THE RADIUS COVERS MOST OF COLORADO, UTAH, AND A LARGE PART OF WYOMING AND NEW MEXICO. ADDITIONAL MILES OVER 300 AT COST.

Sale updates will be posted on Facebook as they become available

ABOVE AVERAGE GOALS REQUIRE TARGETED BULLS

Aim High

The Targeting the Brand™ logo highlights registered Angus bulls with greater genetic potential to produce calves that meet the most challenging specifications of the *Certified Angus Beef*® brand.

Only 1 in 4 non-parent Angus bulls qualify.

Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Dollar Grid Carcass Index (\$G)	+55.0

For more information on Targeting the Brand™ visit CABcattle.com.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

PRODUCTION

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

MATERNAL

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

\$Value Indexes, \$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE, and Fat.

PAP, Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score. PAP score is an indicator of susceptibility to high altitude disease commonly experienced at elevations greater than 5,500 feet. Selection for this trait aims to improve the genetic potential for a sire's progeny to have lower PAP scores thus a lower chance of contracting high altitude disease increasing the environmental adaptability of cattle living in mountain areas.

PAP Risk Factor Chart - Western Slope Angus Association
Information provided by Tim Holt, DVM Recommendations given below based on elevation of the PAP Test and predicted elevation of the animals use.

**PAP RISK FACTOR
 LOW ELEVATION TEST CHART
 PAP TEST CONDUCTED AT ELEVATION <4,000 FT
 (40% Repeatable, Predictive Value)**

PAP Measurements taken below 4,000 feet elevation should be considered a screening measurement only and the measurement not used for sale purposes

PAP Score	Use at Low Elevation (<4,000 feet)	Use at Moderate Elevation (4,000 - 5,500 feet)	Use at High Elevation (5,500-7,500 feet)	Use at Extreme (>7,500)
34-39	Low Risk	Low Risk	Moderate Risk	Moderate Risk
40-45	Low Risk	Moderate Risk	High Risk	High Risk
46-49	Moderate Risk	High Risk	Do Not Use	Do Not Use
>50	Moderate Risk	High Risk	Do Not Use	Do Not Use

**PAP RISK FACTOR
 LOW ELEVATION TEST CHART
 PAP TEST CONDUCTED AT ELEVATION 4,000-5,500 FT
 (60% Repeatable, Predictive Value)**

PAP Score	Use at Low Elevation (<4,000 feet)	Use at Moderate Elevation (4,000 - 5,500 feet)	Use at High Elevation (5,500-7,500 feet)	Use at Extreme (>7,500)
34-39	Low Risk	Low Risk	Low Risk	Low Risk
40-45	Low Risk	Low Risk	Moderate Risk	Moderate Risk
46-49	Moderate Risk	High Risk	Do Not Use	Do Not Use
>50	Moderate Risk	High Risk	Do Not Use	Do Not Use

**PAP RISK FACTOR
 LOW ELEVATION TEST CHART
 PAP TEST CONDUCTED AT ELEVATION 5,500-7,000 FT
 (75-95% Repeatable, Predictive Value)**

PAP Score	Use at Low Elevation (<4,000 feet)	Use at Moderate Elevation (4,000 - 5,500 feet)	Use at High Elevation (5,500-7,500 feet)	Use at Extreme (>7,500)
34-39	Low Risk	Low Risk	Low Risk	Low Risk
40-45	Low Risk	Low Risk	Low/Moderate Risk	Low/Moderate Risk
46-49	Moderate Risk	Moderate Risk	Moderate Risk	High Risk
>50	Moderate Risk	Moderate Risk	High Risk	High Risk

**PAP RISK FACTOR
 LOW ELEVATION TEST CHART
 PAP TEST CONDUCTED AT ELEVATION >7,000 FT
 (95% Repeatable, Predictive Value)**

PAP Score	Use at Low Elevation (<4,000 feet)	Use at Moderate Elevation (4,000 - 5,500 feet)	Use at High Elevation (5,500-7,500 feet)	Use at Extreme (>7,500)
34-39	Low Risk	Low Risk	Low Risk	Low Risk
40-45	Low Risk	Low Risk	Low Risk	Low Risk
46-49	Moderate Risk	Moderate Risk	Moderate Risk	Moderate Risk
>50	Moderate Risk	Moderate Risk	High Risk	High Risk

*When selecting an animal based on a PAP measurement other factors besides those listed above should be considered such as genetics or pedigree, PAP EPDs, Systolic/Diastolic pressures, breed, and previous illness

*Special consideration should be given to the amount of time the animal was exposed to elevation (>5500 ft) prior to testing. The predictability and repeatability of the PAP measurement improves with longer the exposure to higher elevation.

*This chart is based on animals greater than 10 months of age. Testing older animals (>12 months) results in a higher predictive and repeatability measurement.

*Testing of younger animals (<10 months) may result in a greater variability to the predictive and repeatability measurement

Definitions: *Repeatable or Repeatability percent - this is a term used to give strength to a given PAP score predicting that if a retest PAP was carried out later in life then the score would be close to or within the same category as the original measurement. For example; a PAP measurement taken below 4,000 feet only has a 40% repeatable percent meaning that a repeat test only has a 40% chance of staying within the same risk category as the original test.

*Predictive value - this term is closely related to repeatability percent but specifically says that the original score can accurately predict what that animal will retest in a high elevation.

*Risk - Defined as the likelihood of an animal developing pulmonary hypertension themselves or being at risk for having a genetic predisposition for the disease.
